

Importing OM*.000 files

Program: **Allplan 2012**

OM*.000 files contain several smart symbols (smart symbol catalog).

Note: To ensure that Allplan's smart symbol administration registers an OM000000.000 smart symbol catalog file, you need to use **Windows Explorer** to copy this file to the object folder of the **Office** path (... \std\objekt\). The **Standard** path (... \etc\objekt\) is reserved for the smart symbol catalogs that ship with Allplan.

To import an OM000000.000 file

- 1 Download the file.
- 2 Decompress the file and save it in any folder on your computer.
- 3 Determine the path to the std folder of your Allplan installation. To do this, open the **Services** application, select **Hotline Tools** on the **Service** menu and choose **showcfg**.
- 4 Start **Windows Explorer** and select the object folder in the **Office** path (... \std\objekt\).
- 5 Create a subfolder with a meaningful name and copy the OM000000.000 file to this subfolder.
- 6 Start **Allplan 2012**.
- 7 Click  **Get from Library**.
- 8 Select **Smart Symbol Catalog** and click **OK**.
- 9 Select the **Office** folder.

Now you can open the new smart symbol catalog.

Note: There are some restrictions when it comes to managing smart symbols and smart symbol folders in **ProjectPilot**.

Exporting OM*.000 files

Use  **Smart Symbol Catalog** to copy a smart symbol catalog to the external path. For more information see the section Copying smart symbols in Allplan's online Help.
